

## Tilt & Turn Windows

Performance-Led Design  
for Demanding Conditions

**OMNIA Tilt & Turn  
Windows have  
been designed  
for demanding  
conditions.**

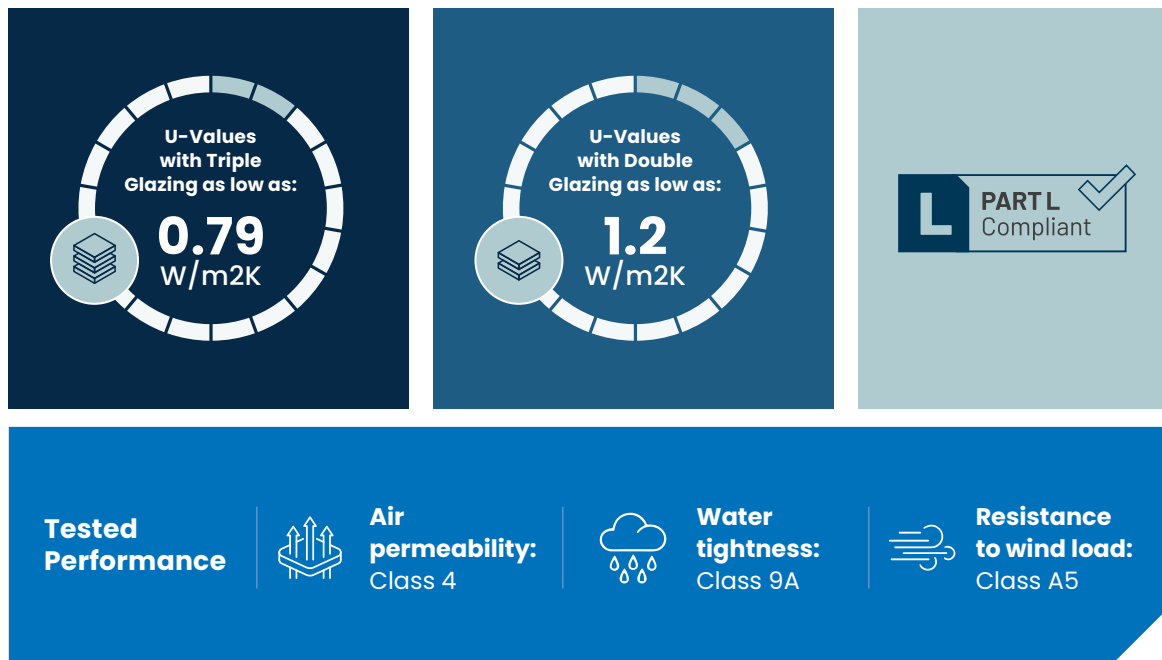

- Thermal efficiency
- Weather resistance
- Flexible configurations
- Security

## Why OMNIA Tilt & Turn Windows?

The OMNIA range combines a double-rebated, double-flush profile with robust sealing to help limit draughts and water ingress when correctly installed. This approach means homeowners in more exposed locations can enjoy the clean, modern appearance of a double-flush design, supported by performance levels that have been tested to suit challenging environments.

- Helps maintain a comfortable home: with a choice of thermal performance options available, OMNIA can support homeowners looking to improve energy efficiency and reduce heat loss.
- Flexible configurations: Tilt & Turn windows are commonly specified due to their practicality, ventilation control and suitability for properties in more exposed areas – qualities reflected in the OMNIA range.
- Developed to support correct installation: the range has been designed to simplify key fabrication and installation steps, supporting VEKA Installers in achieving a consistent and reliable fit.
- Backed by verified testing: all performance information for OMNIA Tilt & Turn Windows is based on verified test data, giving homeowners clear, evidence-based details about how the system performs.

These classifications demonstrate strong resistance to air infiltration, wind-driven rain and exposure.

## Security & compliance

OMNIA Tilt & Turn Windows can be specified to meet recognised UK security and regulatory requirements

## Double Rebate. Double Protection.

At the heart of OMNIA's performance is the double-rebated system design.

**Two gasket seals provide double protection against the elements**

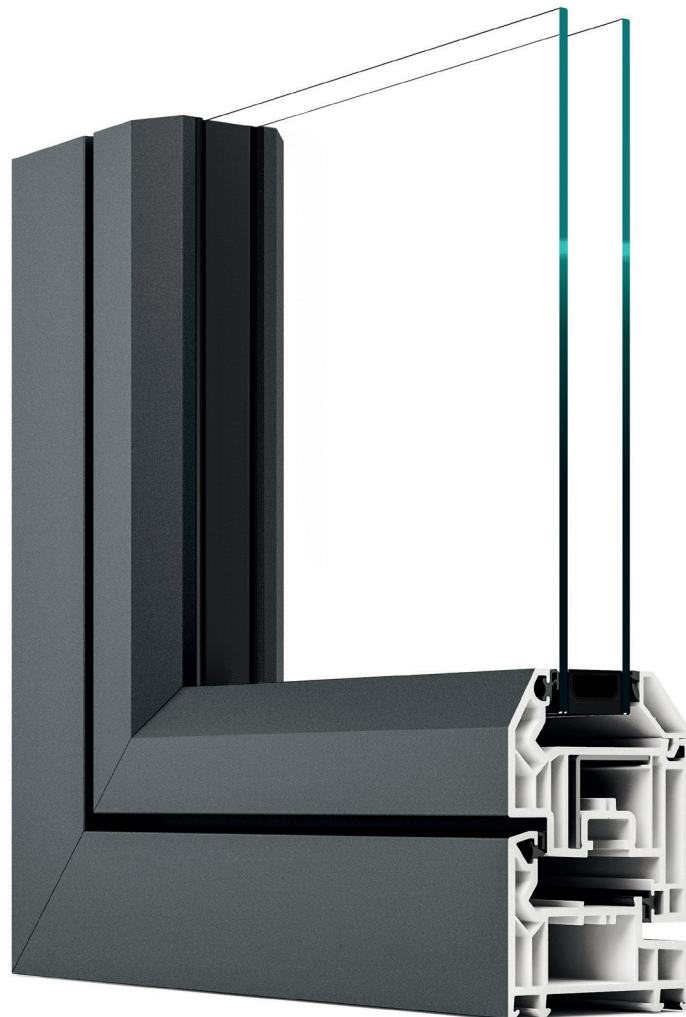

**Improved resistance to draughts and water ingress**

- Particularly well suited to exposed and coastal environments

**PCE gasket is co-extruded directly to the OMNIA profile during manufacture**

- Ensures consistent gasket positioning and quality
- Supports repeatable installation quality

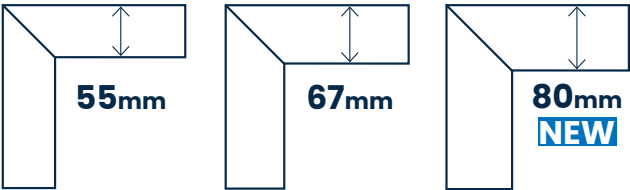

## New Configurations Now Available

**NEW** OMNIA Tilt & Turn Windows are now available positioned alongside a fixed pane.

## Flexible Outer Frame Options

OMNIA is now available with three outer frame depths:

## Benefits of the New 80mm Outer Frame

- Increased space for trickle vent installation
- Reduces the need for frame extensions
- Supports cleaner detailing and simpler onsite installation

## Maximising light without compromising performance

- The 70mm profile frame is designed to maximise visible glass area relative to the frame.
- Helps increase natural light while retaining the system's tested performance credentials.
- Particularly beneficial for residential projects where daylight is a priority.

## Double Flush. Inside and out. Aesthetically pleasing.

- While performance leads the conversation, OMNIA does not compromise on appearance.
- **OMNIA is the only double-flush, double-rebated range currently offering a tilt & turn window.**
- This offers a modern, architectural aesthetic without sacrificing weather, thermal or security performance.

# OMNIA Makes It Simple.

OMNIA is VEKA's complete double-flush, double-rebated system, designed to deliver windows and doors from a single, fully integrated platform.

- Casement windows
- Tilt & turn windows
- French doors
- Residential doors

OMNIA is designed as a complete window and door system, allowing an entire project to be specified and installed using one co-ordinated approach. Because all components are developed to work together – sharing consistent profiles, detailing and performance principles – it helps reduce complexity for everyone involved in the process.

For homeowners, this means a more streamlined project, with a system that has been designed to support consistent installation and long-term serviceability. Using one system also helps maintain a uniform appearance across the property.

## **Aligned performance**

Thermal, weather and security performance is designed at system level, supporting a consistent approach across every product in the range.

## **Consistent aesthetics**

The double-flush appearance is carried through all OMNIA windows and doors for a cohesive look across the whole property.

# Colour, made easier.

OMNIA colours are grouped into considered palettes to simplify specification and support confident design decisions.

Each palette brings together tones that work naturally with common architecture and masonry types.

## Made to order Colour Range

In addition to our Stocked colour range, we also have a collection of made-to-order colours on an extended lead time. Speak to our team to learn more.

You can also download the Colour Variations Guide on VEKA Edge.

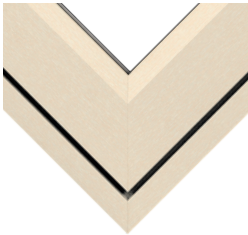

### Light & Neutral Tones

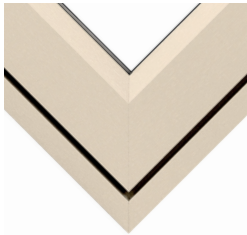

Ideal for traditional homes, renovations and lighter masonry. Suitable for projects where subtle contrast or continuity with stonework is required.

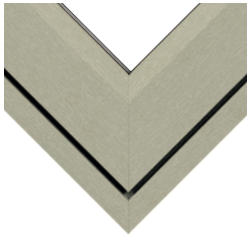

White

Cream

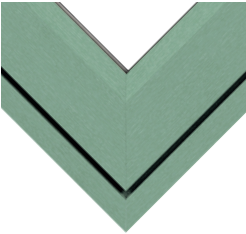

Claystone

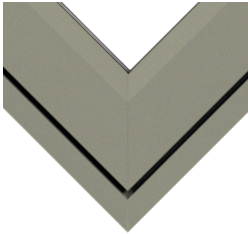

Pebble Grey

### Soft Greens & Heritage Tones

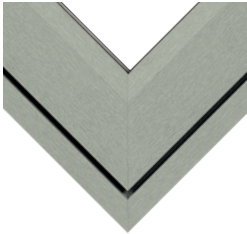

Frequently specified in rural, conservation influenced and period style properties. Designed to complement natural surroundings and traditional materials.

Chartwell Green

Sage Green

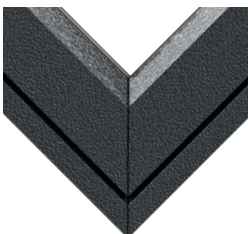

Agate Grey

### Dark & Contemporary Tones

Popular for new builds and contemporary extensions. Creates sharp contrast against render, stone and brick.

Anthracite Grey  
(Grained)

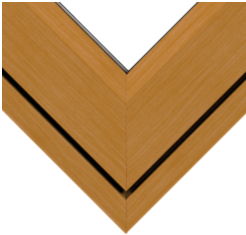

**Feinstruktur**  
Anthracite Grey

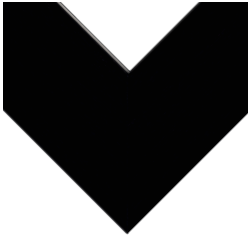

**Feinstruktur**  
Black

### True Timber Effects Tones

For projects seeking a wood inspired appearance. Timber effect foils offer visual warmth with low maintenance benefits.

Irish Oak

Beck Brown

Colours are for illustration purposes only, we highly recommend requesting a swatch before placing an order.

# OMNIA Makes It Simple.

When one system does it all, everything gets simpler.

OMNIA brings together performance led design, tested credentials and coordinated aesthetics – helping fabricators and installers to deliver complete projects with confidence.
